MAM Soft Brush

Instruction for use:
- The bottle brush is made from high quality materials: bristles and teat brush: TPE; handle: PP
- Clean before first use and at regular intervals thereafter.
- Inspect the bottle brush before each use.
- Discontinue use at the first signs of damage or weakness.
- Defect brushes can damage bottle and teat.
- To ensure hygiene rinse the bottle brush thoroughly after use and let it dry in a well-aired place.
- For disinfection wash with detergent and warm water.
- The bottle brush can be placed in a dishwasher (cutlery or top rack) at low temperatures (~ 60°C).
- Do not rest the bottle brush directly on the soft bristles in the dishwasher. Place the bottle brush in the cutlery or top rack, bristles up for dishwashing.
- Do not use aggressive cleaning agents.
- Food colourings may discolour the bottle brush.
- Do not boil, steam or microwave sterilise.
- Otherwise deformation of bristles can occur.
- Suitable for cleaning all bottles and teats.
- The Soft Brush is also especially suitable for cleaning MAM Cups.

Warning: The Soft Brush is not a toy. Please keep out of the reach of babies and children.

Microwave Steam Steriliser

Microwave Steam Steriliser Usage:
1) Carefully wash all items (soothers, bottles etc.) and components in mild soapy water and then rinse with clean water.
2) Open the latch on the microwave steam steriliser. Remove the lid. Take the upper and lower baskets out as necessary.

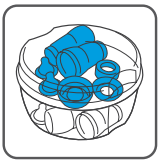

1 lid
2 upper basket
3 lower basket
4 base

3) Fill exactly 200ml / 7 UK floz into the base of the microwave steam steriliser. The use of a measuring cup is recommended. Please pay attention to the measure marking inside the base! Ensure an exact measure of water.
4) For sterilisation disassemble the products to their individual components. MAM Anti-Colic bottles must be completely disassembled; the base ventilation must be taken out of the screw base for sterilisation. Sterilising assembled components can damage the bottle.
5) Place the bottles and components in the microwave steam steriliser. In the MAM Microwave Steam Steriliser the products can be flexibly arranged on 2 levels and the
steriliser holds up to:

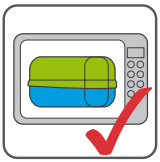

- 6 MAM Anti-Colic 5,5 oz bottles or
- 4 MAM Anti-Colic 9 oz bottles or
- 5 MAM Baby Bottles 11 oz or
- 6 MAM Baby Bottles 9,5 oz

incl. additional products like soothers.

6) With the products inside, replace the lid and close the latch. The lid must „click" into place.
7) Place the appliance in the microwave. Should the appliance not fi t into the microwave, please check that the lid has „clicked" into place correctly.

8) The appliance is suitable for microwaves with wattage 500 to 1850. The sterilisation times correspond to the microwave's wattage; adhere to the given times:

Wattage	Time*	Cooling time
650 W – 1000 W	11 min	3 min
1050 W – 1800 W	6 min	3 min
1850 W:	5 min	3 min

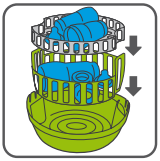

*max. power

9) Allow microwave steam steriliser to cool down before removing from microwave. Recommended cooling time: 3 minutes at opened microwave door. Hold the steriliser straight when removing.

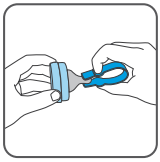

10) CAUTION when opening the steriliser after use. Hot water vapour can escape and the remaining water may be very hot - SCALDING HAZARD.
11) Residual water in the products can be removed with the draining function in the lid. On the inside of the lid there are drainage grooves. Products can be placed in the inside of the upturned lid individually or with the baskets.

12) Use the tongs to remove and assemble the components.

13) Pour any water from inside the steriliser away and dry with a soft cloth.
14) After the sterilisation process, products stay sterile for up to 24 hours in closed appliance.

Cold Water Sterilisation Usage:

1) Carefully wash the bottles and components in mild soapy water and then rinse with clear water.
2) Various commercially available anti-bacterial solutions or tablets can be used for cold water sterilisation.
3) Always follow the manufacturer's instructions.
4) Fill the base of the microwave steam steriliser with water. The measure of water and duration of sterilisation depends on the instructions from the manufacturer of the solution or tablets and the number of products to be sterilised. All components must be fully immersed for sterilisation.

5) Air bubbles in bottles compromise sterilisation.
6) Sterilisation solution must be regularly renewed according to the manufacturer's instructions.
7) Pour away any surplus sterilisation solution

General Information:
- The microwave steam steriliser should only be placed on solid, flat, dry and nonflammable surfaces.
- The microwave steam steriliser is aligned to commercially available microwave appliances. There must be enough space between the microwave and steriliser. The steriliser must not touch the microwave walls. Do not force the steriliser into the microwave. Sterilising in too small a microwave can damage the steriliser and the microwave.
- Do not sterilise metal or electronic parts. Watch out for non-sterilisable elements of composite products.
- Filling the steriliser with inaccurate water measures can damage the steriliser and the microwave. Too little water and the parts will not be properly sterilised. Too much water extends the sterilisation time. Never place in the microwave without water.
- Do not use bleach.
