ALR 900 | AVR 1100

en Original instructions

6 | English

Safety Notes

Warning! Read these instructions carefully, be familiar with the controls and the proper use of the machine. Please keep the instructions safe for later use!

Explanation of symbols on the machine

General hazard safety alert.

Read instruction manual.

Pay attention that bystanders are not injured through foreign objects thrown from the machine.

Keep bystanders a safe distance away from the machine.

Sharp tines/blades. Beware of severing toes or fingers.

Switch off and remove plug from mains before adjusting, cleaning or if the cable is entangled and before leaving the machine unattended for any period. Keep the supply flexible cord away from the raking tines/blades.

Beware electric shock hazard.

Keep supply flexible cord away from cutting means.

Wait until all machine components have completely stopped before touching them. The tines/blades continue to rotate after the machine is switched off, a rotating tine/blade can cause injury.

Do not use the machine in the rain or leave it outdoors when it is raining.

Operation

- ▶ This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.
- ▶ Never operate the product when you are tired, ill or under the influence of alcohol, drugs or medicine.
- ▶ Never allow children or people unfamiliar with these instructions to use the machine. Local regulations may restrict the age of the operator. When not in use store the machine out of reach of children.
- ▶ Never rake/verticut while people, especially children or pets are nearby.
- ▶ The operator or user is responsible for accidents or hazards occurring to other people or their property.
- ▶ Wear hearing protection and safety glasses at all times while operating the machine.
- ▶ Do not operate the machine when barefoot or wearing open sandals, always wear substantial footwear and long trousers.
- ▶ Thoroughly inspect the area where the machine is to be used and remove all stones, sticks, wires, bones and other foreign objects.
- ▶ Before using, always visually inspect to see that the tines and tine assembly are not worn, damaged or loose.
- ▶ Replace worn or damaged tine and assemblies in sets to preserve balance. On multi-tined machines, take care as rotating one tine can cause other tines to rotate.
- ▶ Wear full eye protection when using the machine without the catcher.
- ▶ Walk, never run.
- ▶ Rake/Verticut only in daylight or in good artificial light.
- ▶ Avoid operating the machine in wet grass, where feasible or take additional precautions to avoid slipping.

- ▶ Raking/Verticutting on banks can be dangerous.
- ▶ Do not rake/verticut excessively steep slopes.
- Always be sure of your footing on slopes or wet grass.
- Rake/Verticut across the face of slopes – never up and down.
- Exercise extreme caution when changing direction on slopes.
- Use extreme caution when stepping back or pulling the machine towards you.
- ▶ Never rake/verticut by pulling the machine towards you.
- ▶ Stop the machine if the machine has to be tilted for transportation when crossing surfaces other than grass and when transporting the machine to and from the area to be raked/verticut.
- ▶ Never operate the machine without the catcher or deflector guard in position.
- ▶ Switch on the motor according to the instructions with feet well away from rotating parts.
- ▶ Do not tilt the machine when starting or switching on the motor, except if the machine has to be tilted for starting in long grass. In this case, do not tilt if more than absolutely necessary and tilt only the part which is away from the operator. Always ensure that both hands are in the operating position before returning the machine to the ground.
- ▶ Do not put hands or feet near or under rotating parts.
- ▶ Always stand clear of the discharge zone when operating the machine.
- ▶ Never pick up or carry the machine while the motor is running.
- ▶ Be careful during adjustment of the machine to prevent entrapment of the feet and hands between moving tines/blades and fixed parts of the machine.
- ▶ **Regularly inspect the supply cable and any extension cables. Do not connect damaged cables to the supply or touch a damaged cable before it is disconnected from the supply.** A damaged cable can lead to contact with live parts. Beware electric shock hazard.

- ▶ Do not touch the tines before the machine is disconnected from the supply and the tines have come to a complete stop.

- ▶ **Keep supply cables and extension cables away from the tines.** The tines can cause damage to the cables and lead to contact with live parts. Beware electric shock hazard.

Remove the plug from the socket:

- whenever you leave the machine,
- before clearing a blockage,
- before checking, cleaning or working on the machine,
- after striking a foreign object. Inspect the machine for damage and make repairs as necessary,
- if the machine starts to vibrate abnormally (check immediately).

Maintenance

- ▶ Keep all nuts, bolts and screws tight to be sure that the machine is in safe working condition.
- ▶ Check the catcher frequently for wear or deterioration.
- ▶ Examine the machine and replace worn or damaged parts for safety.
- ▶ Ensure replacement parts fitted are Bosch approved.
- ▶ Always wear gardening gloves when handling or working near the sharp tines/blade.

Power supply

- ▶ The voltage indicated on the rating plate must correspond to the voltage of the power source.
- ▶ We recommend that this equipment is only connected into a socket which is protected by a circuit-breaker that would be actuated by a 30 mA residual current.
- ▶ Only use or replace power supply cables for this unit which correspond to the types indicated by the manufacturer. See the operating instructions for the order no. and types.
- ▶ Never touch the mains plug with wet hands.

8 | English

- ▶ Do not run over, crush or pull the power supply cable or extension lead, otherwise it may be damaged. Protect the cable from heat, oil and sharp edges.
- ▶ The extension lead must have a cross section in accordance with the operating instructions and be protected against splashed water. The connection must not be in water.
- ▶ Always wear gardening gloves when handling or working near the sharp tines/blade.

Functional Description

Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

Intended Use

This product is intended for domestic, lawn raking, scarifying or verticutting of lawn. At higher height of cut level the product is intended for collection of leaves in the lawn area.

Delivery Scope

Carefully remove the machine from its packaging and check if the following parts are complete:

- Lawnraker (ALR 900)/Verticutter (AVR 1100)
- Handle bottom
- Handle top
- Grassbox top
- Grassbox bottom (packed inside grassbox top)
- 4 Bolts
- 4 Wing nuts
- 2 Cable clips
- Operating instructions

When parts are missing or damaged, please contact your dealer.

When fully assembled the machine weighs approximately 9.9–10.4 kg. If necessary, obtain assistance to remove from packaging.

Take care when removing from packaging or carrying the machine to the lawn, as the tines/blades are sharp.

Product Features

The numbering of the components shown refers to the representation of the machine on the graphic pages.

- 1 Handle top
- 2 Switch lever
- 3 Safety button
- 4 Power plug**
- 5 Cable restraint
- 6 Handle bottom
- 7 Grassbox
- 8 Ventilation slots
- 9 Height of cut lever
- 10 Serial number

**** country specific**

Accessories shown or described are not part of the standard delivery scope of the product. A complete overview of accessories can be found in our accessories program.

Technical Data

Lawnraker / Verticutter		ALR 900	AVR 1100
Article number		3 600 H8A 0..	3 600 H8A 1..
Rated power input	W	900	1100
Cutting width	cm	32	32
Grassbox, capacity	l	50	50
Cutting system			
– Double wound tines		●	–
– Pivoting blades		–	●
Collection system		Jet Collect	Jet Collect
Height of cut	mm	+10/+5/0/-5	+5/0/-5/-10
Weight according to EPTA-Procedure 01/2003	kg	9.9	10.4
Serial number	See serial number 10 (type plate) on the machine		

Noise/Vibration Information

Measured values determined according to 2000/14/EC (1.60 m height, 1.0 m distance away) and EN ISO 5349.

Typically the A-weighted noise levels of the product are: Sound pressure level 78 dB(A); Guaranteed sound power level lower than 94 dB(A). Uncertainty K = 3 dB.

The hand-arm acceleration is typically below 2.5 m/s².

Declaration of Conformity

We declare under our sole responsibility that the product described under "Technical data" is in conformity with the following standards or standardization documents: EN 60335 according to the provisions of the directives 2004/108/EC, 98/37/EC (until 28 Dec 2009), 2006/42/EC (from 29 Dec 2009), 2000/14/EC. 2000/14/EC: Measured sound power level 92 dB(A). Conformity assessment procedure according to Annex V.

Assembly

For Your Safety

- ▶ **Warning! Switch off, remove plug from mains before adjusting, cleaning or if cable is cut, damaged or entangled.**
- ▶ **The tines/blades continue to rotate for a few seconds after the machine is switched off.**
- ▶ **Caution – do not touch rotating tines/blades.**
- ▶ **Always wear gardening gloves when handling or working near the sharp tines/blade.**

10 | English

Electrical Safety

Your machine is double insulated for safety and requires no earth connection. The operating voltage is 230 V AC, 50 Hz (for non-EU countries 220 V, 240 V as applicable). Only use approved extension cables. Contact your Bosch Service Centre for details.

Extension cords/leads should only be used if they comply with H05VV-F, H05RN-F types or IEC type design (60227 IEC 53, 60245 IEC 57).

If you want to use an extension cable when operating your product, only the following cable dimensions should be used:

- 1.0 mm²: max. length 40 m
- 1.5 mm²: max. length 60 m
- 2.5 mm²: max. length 100 m

Note: If an extension cable is used it must be earthed and connected through the plug to the earth cable of your supply network in accordance with prescribed safety regulations.

If in doubt contact a qualified electrician or the nearest Bosch Service Centre.

WARNING! Inadequate extension cables can be dangerous. Extension cable, plug and socket must be of watertight construction and intended for outdoor use.

Cable connections should be kept dry and off ground.

It is recommended for increased electrical safety to use a Residual Current Device (RCD) with a tripping current of not more than 30 mA. Always check your RCD every time you use it.

If the supply cord is damaged, it must be replaced by a Bosch Service Centre.

Products sold in **GB only**: Your product is fitted with an approved 13 A (BS 1363/A) electric plug and is protected by a 13 A fuse (ASTA Approved to BS 1362).

If the fitted plug is not suitable for your socket outlets, it should be cut off and an appropriate plug fitted in its place.

The severed plug must be disposed of to avoid a possible shock hazard and should never be inserted into a 13 A socket elsewhere.

Assembly

- **Ensure the cables are not trapped when folding/unfolding top/bottom handles. Do not drop the handles.**

Assembly of Product A

Fix the handle bottom **6** to the body of the machine with two bolts and wing nuts.

Attach the handle top **1** with the bolts and the wing nuts to the handle bottom **6**.

Note: Ensure that the cable clips supplied are used to fix the cable to the handle.

Attach cable to cable restraint **5** ensuring that sufficient cable slack is available.

Grassbox B C

Separate the grassbox top from the grassbox bottom.

Locate the rear of the grassbox top into the rear of the grassbox bottom and close the two halves together.

Fasten the two red clips (one per side).

Attach/remove the grassbox **7** as shown.

Adjusting the Cutting Height D

Pull the lever top **9** towards the wheel and then rotate it to the front or rear of the machine to achieve the desired cutting height.

Repeat this for both sides of the product.

Make sure that both levers **9** are set to the same position.

Note: In certain conditions, mud can build up on the tread of the wheels and/or the machine may sink slightly into the ground. This can effect the depth of ground penetration.

Operation**Starting**

- **The tines/blades continue to rotate for a few seconds after the machine is switched off. Allow the motor and tines/blades to stop rotating before switching "on" again.**
- **Do not rapidly switch off and on.**

Note: To aid starting push handle down to lift front wheels.

Starting **E F**

- Press and hold the safety button **3**.
- Squeeze the switch lever **2** towards the handle.
- Release the safety button **3**.

Stopping

Release the switch lever **2**.

Working Advice

Raking/Verticutting

Place the ALR 900/AVR1100 on the edge of the lawn, as close to the power point as possible. Work away from the power point.

Position the cable to opposite side (already raked/verticut lawn) at the end of each turn.

When raking/verticutting **do not allow the motor to labour**.

ALR 900:

When the motor labours the speed of the motor drops and you will hear a change in the motor sound. When this occurs, stop raking, release switch lever **2** and **raise the height of cut**. Failure to do so could damage the machine.

AVR 1100:

The motor is protected by a safety cut out which is activated when the blades become jammed, clogged or if the motor is overloaded. When this occurs, stop using the machine.

The safety cut out will only reset if the switch lever **2** is released.

Remove the plug from the power supply, clear any obstruction and wait a minute for the safety cut out to reset before continuing to use the machine.

► **Always wear gardening gloves when handling or working near the sharp tines/blade.**

Note: When waiting for a reset, operating switch lever **2** too early with the machine plugged into the supply will prolong the reset time of the safety cut out.

If the machine cuts out again, increase the height of cut or postpone use until conditions improve. Please refer to "trouble shooting table" and "raking/verticutting tips".

Raking/Verticutting Tips

Optimum conditions for raking/verticutting are when the grass is short and slightly damp. Raking/Verticutting when the ground is very soft or hard it will may damage the lawn and will result in poor collection.

- Kill moss with a proprietary moss killer before raking/verticutting.
- Start the ALR 900/AVR 1100 at the highest raking/verticutting position and lower as necessary.
- Rake/Verticut the lawn in the one direction, then proceed at right angles a week later until the whole lawn has been completed.
- The action of removing moss and debris during raking/verticutting may reveal ragged and bare patches depending on lawn conditions.

Note: In conditions with excessive tree debris (e. g. leaves, twigs, etc.) first clear the surface by using the machine with a height of cut setting of either 3 or 4.

For best results mow the lawn before reseeding. Promote the spread of grass into bare and weak areas with good quality lawn seed after raking/verticutting. Allow fresh grass seed to root and establish before fertilising, where necessary water to prevent fresh seeds drying out.

Ideal times for raking/verticutting are spring and late autumn.

Also lawn can be maintained by raking/verticutting on a higher setting after every six cuts.

12 | English

Troubleshooting

The following chart lists problem symptoms, possible causes and corrective action, if your machine does not operate properly. If these do not identify and correct the problem, contact your service agent.

► **Warning: Switch off and remove plug from mains before investigating fault.**

Problem	Possible Cause	Corrective Action
Machine fails to operate	Power turned off	Turn power on
	Mains socket faulty	Use another socket
	Extension cable damaged	Inspect cable, replace if damaged
	Fuse faulty/blown	Replace fuse
	Possible clogging	Check underneath the machine and clear out as necessary (always wear gardening gloves)
	Motor protector activated (AVR 1100 only)	See below*
	Raking/Verticutting too low for the conditions	Increase height of cut
	Obstructed rotor	Clear obstruction (always wear gardening gloves)
Machine functions intermittently	Blocked side grilles	Clear debris from the outside of the side grilles
	Grassbox full	Empty the grassbox regularly
	Extension cable damaged	Inspect cable, replace if damaged
	Internal wiring of machine damaged	Contact Service Agent
	Worn/Missing tines/blades	ALR 900: Fit replacement (see "Removing/Fitting Raker Tines") AVR 1100: Contact Service Agent
	Conditions too wet	Increase height of cut (see "Raking/Verticutting Tips")
	Too much debris on the ground	See below*
	Possible clogging	Check underneath the machine and clear out as necessary (always wear gardening gloves)
	Raking/Verticutting too low for the conditions	Increase height of cut
	Grass too long	Cut grass
	Very uneven surface	Increase height of cut
	Grassbox full	Empty the grassbox regularly

Problem	Possible Cause	Corrective Action
Machine labours or belt squeals	Height of cut too low	Increase height of cut (see “Adjusting the Cutting Height”)
Cutting tines/blades not rotating	Cutting tines/blades obstructed by grass	Clear obstruction (always wear gardening gloves)
	Belt is slipping or is damaged	Contact Service Agent
Excessive vibrations/noise	Cutting tines/blades damaged	ALR 900: Fit replacement (see “Removing/Fitting Raker Tines”) AVR 1100: Contact Service Agent
Poor collection	Raking/Verticutting in wet conditions	Increase height of cut (see “Raking/Verticutting Tips”)
	Raking/Verticutting too low for the conditions	Increase height of cut
	Possible clogging	Check underneath the machine and clear out as necessary (always wear gardening gloves)
	Blocked side grilles	Clear debris from the outside of the side grilles
	Missing tine springs (ALR 900 only)	Replace tine springs (always wear gardening gloves)

*In conditions with excessive tree debris (e. g. leaves, twigs, etc.) first clear the surface by using the machine with a height of cut setting of either 3 or 4.

Maintenance and Service

Maintenance and Cleaning

- **Stop, remove plug from the power supply and remove the grassbox.**
- **Always wear gardening gloves when handling or working near the sharp tines/blade.**

Note: To ensure long and reliable service, carry out the following maintenance regularly.

Regularly check for obvious defects such as loose, dislodged or damaged tines/blades, loose fixings, and worn or damaged components.

Check that covers and guards are undamaged and correctly fitted. Carry out necessary maintenance or repairs before using.

If the machine should happen to fail despite the care taken in manufacture and testing, repair should be carried out by an authorised customer service agent for Bosch garden products.

In all correspondence and spare parts orders, please always include the 10-digit article number given on the type plate of the machine.

Removing/Fitting Raker Tines

- **Stop, remove plug from the power supply and remove the grassbox.**
- **Always wear gardening gloves when handling or working near the sharp tines/blade.**

Turn the machine over.

Use long-nose pliers to grip the tine **12**, press down and remove the tine **12** from the pin **11**. (see figure G)

The new tine **12** is mounted in reverse order.

14 | English

After Raking or Verticutting/Storage

Clean the exterior of the machine thoroughly using a soft brush and cloth. Do not use water, solvents or polishes. Remove all grass and debris, especially from the ventilation slots **8**.

Turn the machine on its side and clean the tine/blade area. If grass or dirt is compacted in the tine/blade area, remove with a wooden or plastic implement.

- **Always wear gardening gloves when handling or working near the sharp tines/blade.**

Store the machine in a dry place. Do not place other objects on top of the machine. To save space, fold up the handle fully.

- **Ensure the cables are not trapped when folding/unfolding top/bottom handles. Do not drop the handles.**

The machine can be stored with the grassbox disassembled. (see figure H)

After-sales Service and Customer Assistance

Our after-sales service responds to your questions concerning maintenance and repair of your product as well as spare parts. Exploded views and information on spare parts can also be found under:

www.bosch-pt.com

Our customer consultants answer your questions concerning best buy, application and adjustment of products and accessories.

Disposal

The machine, accessories and packaging should be sorted for environmental-friendly recycling.

Only for EC countries:

Do not dispose of power tools into household waste!

According the European Guideline 2002/96/EC for Waste Electrical and Electronic Equipment and its implementation into national right,

power tools that are no longer usable must be collected separately and disposed of in an environmentally correct manner.

Subject to change without notice.
