Find your phone, keys, or anything.

What is Tile?

Tile is a small Bluetooth device you attach to anything you don't want to lose.

You can locate your item via the Tile app on any phone or web browser. You can also use your Tile to find your phone.

Tile saves time, saves money, and gives peace of mind.

1. Locate by sound

Ring your Tile from the app or press your Tile to ring your phone – even when it's on silent.

2. Last place seen

The app always shows the last time and place it saw your Tile. Simply open the app to view the map.

3. Mark as lost

If your Tile is not where the app last saw it, tap the Mark as Lost button in the app. This will securely and anonymously put all other Tile apps on the lookout for your Tile. You'll receive an alert when another Tiler comes within range of your item. We call this feature Community Find.

Troubleshooting tip: If the app isn't connecting to your phone, turn off Bluetooth, wait 30 seconds and then turn Bluetooth back on.

10 Minutes per day

The average person spends looking for misplaced stuff.

3,000 Items per year

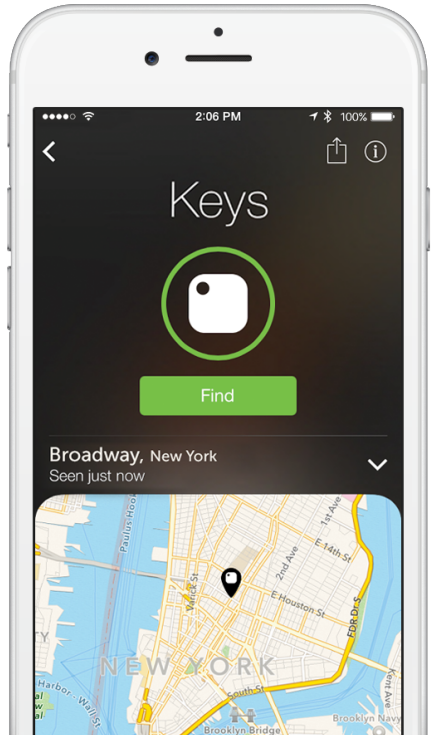

Misplaced by the average person.

250,000 Items per day

Found by Tile users around the world.

Web App

If you do not have your phone or Tile, you can log into our web app and see the location of your phone.

Maximum thought. Minimal design.

Technology

Tile is powered by Bluetooth 4.0, which has a range up to 100 ft.

TIP - Always keep your bluetooth and Tile app running in the background.
