SAFETY INSTRUCTIONS

WARNING: The appliance and its accessible parts become hot during use. Care should be taken to avoid touching heating elements.

- Children under 8 Year of age must be kept away from the appliance unless they are continuously supervised.
- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.
- Children must not play with the appliance.
- Cleaning and user maintenance shall not be made by children without supervision.
- During use the appliance becomes hot. Care should be taken to avoid touching heating elements inside the oven.

WARNING: Accessible parts may become hot during use. Young children must be kept away.

- Do not use harsh abrasive cleaners or sharp metal scrapers to clean the oven door glass since they can scratch the surface, which may result in shattering of the glass.
- The oven must be switched off before removing the guard, after cleaning, the guard must be replaced in accordance with the instructions.
- Only use the temperature probe recommended for this oven.
- Do not use a steam cleaner for cleaning operations.
- **WARNING:** Avoid possibility of electric shock - ensure the appliance is switched off before replacing the lamp.
- The means for disconnection must be incorporated in the fixed wiring in accordance with the wiring rules.
- The instructions state the type of cord to be used, taking into account the temperature of the rear surface of the appliance.
- If the supply cord is damaged, it must be replaced by a special cord or assembly available from the manufacturer or its service agent.
- **CAUTION:** In order to avoid a hazard due to inadvertent resetting of the thermal cutout, this appliance must not be supplied through an external switching device, such as a timer, or connected to a circuit that is regularly switched on and off by the utility.
- **CAUTION:** Accessible parts may be hot when the grill is in use. Young children must be kept away.
- Excess spillage must be removed before cleaning.
- During self-cleaning pyrolytic operation the surfaces may get hotter than usual and children **MUST** be kept away.

This appliance is marked according to the European directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE). WEEE contains both polluting substances (which can cause negative consequences for the environment) and basic components (which can be re-used). It is important to have WEEE subjected to specific treatments, in order to remove and dispose properly all pollutants, and recover and recycle all materials. Individuals can play an important role in ensuring that WEEE does not become an environmental issue; it is essential to follow some basic rules:

- WEEE shall not be treated as household waste.
- WEEE shall be handed over to the relevant collection points managed by the municipality or by registered companies. In many countries, for large WEEE, home collection could be present.
- When you buy a new appliance, the old one may be returned to the retailer who has to collect it free of charge on a one-to-one basis, as long as the equipment is of equivalent type and has the same functions as the supplied equipment.

ENERGY SAVING AND RESPECTING THE ENVIRONMENT

Where possible, avoid pre-heating the oven and always try to fill it. Open the oven door as infrequently as possible, because heat from the cavity disperses every time it is opened. For a significant energy saving, switch off the oven between 5 and 10 minutes before the planned end of the cooking time, and use the residual heat that the oven continues to generate. Keep the seals clean and in order, to avoid any heat dispersal outside of the cavity. If you have an electric contract with an hourly tariff, the "delayed cooking" programme makes energy saving more simple, moving the cooking process to start at the reduced tariff time slot.

1. GENERAL WARNINGS

Thank you for choosing one of our products. To get the most out of your oven we recommend that you:

- Read the notes in this manual carefully: they contain important instructions on how to install, use and service this oven safely.
- Keep this booklet in a safe place for easy, future reference.

All accessible parts are hot when the appliance is in operation, take care to not touch these elements.

When the oven is first switched on it may give out acrid smelling fumes. This is because the bonding agent for insulating panels around the oven has been heated up for the first time.

This is a completely normal, if it does occur you merely have to wait for the fumes to clear before putting the food into the oven.

An oven by its very nature becomes very hot. Especially the glass of the oven door.

1.1 DECLARATION OF COMPLIANCE

The parts of this appliance that may come into contact with foodstuffs comply with the provisions of EEC Directive 89/109.

By placing the **CE** mark on this product, we are confirming compliance to all relevant European safety, health and environmental requirements which are applicable in legislation for this product.

When you have unpacked the oven, make sure that it has not been damaged in any way. If you have any doubts at all, do not use it: contact a professionally qualified person. Keep packing materials such as plastic bags, polystyrene, or nails out of the reach of children because they are dangerous for children.

1.2 SAFETY HINTS

•The oven must be used only for the purpose for which it was designed: it must only be used for cooking food. Any other use, e.g. as a form of heating, is an improper use of the oven and is therefore dangerous.

•The manufacturers cannot be held responsible for any damage caused by improper, incorrect or unreasonable use. **When using any electrical appliance you must follow a few basic rules.**

– Do not pull on the power cable to remove the plug from the socket.

– Do not touch the oven with wet or damp hands or feet.

– Do not use the oven unless you are wearing something on your feet.

– It is not generally a good idea to use adapters, multiple sockets for several plugs and cable extensions.

– If the oven breaks down or develops a fault switch it off at the mains and do not touch it.

•If the cable is at all damaged it must be replaced promptly.

When replacing the cable, follow these instructions. Remove the power cable and replace it with one of the H05RRF, H05VV-F, H05V2V2-F type. The cable must be able to bear the electrical current required by the oven. Cable replacement must be carried out by properly qualified technicians. The earthing cable (yellow-green) must be 10 mm longer than the power cable.

Use only an approved service centre for repairs and ensure that only original parts are used. If the above instructions are not adhered to the manufacturers cannot guarantee the safety of the oven.

•**Do not line the oven walls with aluminium foil or single-use protection available from stores. Aluminium foil or any other protection, in direct contact with the hot enamel, risks melting and deteriorating the enamel of the insides.**

1.3 INSTALLATION

Installation is the customer's responsibility. The manufacturers have no obligation to carry this out. If the assistance of the manufacturer is required to rectify faults arising from incorrect installation, this assistance is not covered by the guarantee.

The installation instructions for professionally qualified personal must be followed. Incorrect installation may cause harm or injury to people, animals or belongings. The manufacturer cannot be held responsible for such harm or injury.

1.4 FITTING THE OVEN INTO THE KITCHEN UNIT

Fit the oven into the space provided in the kitchen unit; it may be fitted underneath a work top or into an upright cupboard. Fix the oven in position by screwing into place, using the four fixing holes in the frame. (Fig. on last page).

To locate the fixing holes, open the oven door and look inside. To allow adequate ventilation, the measurements and distances indicated in the diagram on last page must be adhered to when fixing the oven.

Note: For ovens that are combined with a hob unit the instructions contained in the manual for the hob unit must be followed.

1.5 IMPORTANT

If the oven is to work properly, the kitchen housing must be suitable. The panels of the kitchen unit that are next to the oven must be made of a heat resistant material. Ensure that the glues of units made of veneered wood can withstand temperatures of at least 120 °C. Plastics or glues that cannot withstand such temperatures will melt and deform the unit. Once the oven has been lodged inside the unit, the electrical parts must be completely insulated. This is a legal safety requirement. All guards must be firmly fixed into place so that it is impossible to remove them without using special tools.

Remove the back of the kitchen unit to ensure an adequate current of air circulates around the oven. The hob must have a rear gap of at least 45 mm.

1.6 CONNECTING TO THE POWER SUPPLY

Plug into the power supply. Ensure first that there is a third contact that acts as earthing for the oven. **The oven must be properly earthed.**

If the model of oven is not fitted with a plug, fit a standard plug to the power cable. It must be able to bear the power supply indicated on the specifications plate. The earthing cable is yellowgreen. The plug must be fitted by a properly qualified person. If the socket and the plug are incompatible the socket must be changed by a properly qualified person. A properly qualified person must also ensure that the power

cables can carry the current required to operate the oven.

An ON/OFF switch may also be connected to the power supply. The connections must take account of the current supplied and must comply with current legal requirements. The yellow-green earthing cable must not be governed by the ON/OFF switch. The socket or the ON/OFF switch used for connecting to the power supply must be easily accessible when the oven has been installed.

Important: During installation, position the power cable in such a way that it will not be subjected to temperatures of above 50°C at any point.

The oven complies with safety standards set by the regulatory bodies.

The oven is safe to use only if it has been adequately earthed in compliance with current legal requirements on wiring safety. You must ensure that the oven has been adequately earthed.

The manufacturers cannot be held responsible for any harm or injury to persons, animals or belongings caused by failure to properly earth the oven.

WARNING: the voltage and the supply frequency are showed on the rating plate (fig. on last page).

The cabling and wiring system must be able to bear the maximum electric power required by the oven. This is indicated on the specifications plate. If you are in any doubt at all, use the services of a professionally qualified person.

1.7 OVEN EQUIPMENT (according to the model)

It is necessary to do an initial cleaning of the equipment before the first use of each of them. Wash them with a sponge. Rinse and dry off.

The simple shelf can take moulds and dishes.

The tray holder shelf is especially good for grilling things. Use it with the drip tray.

The special profile of the shelves means they stay horizontal even when pulled right out. There is no risk of a dish sliding or spilling.

The drip tray catches the juices from grilled foods. It is only used with the Grill, Rotisserie, or Fan Assisted Grill ; remove it from the oven for other cooking methods.

Never use the drip tray as a roasting tray as this creates smoke and fat will spatter your oven making it dirty.

The pizza set is designed for pizza cooking. In order to obtain the best results the set must be used together with Pizza function.

The tray holder

The tray holder shelf is ideal for grilling. Use it in conjunction with the drip tray. A handle is included to assist in moving the both accessories safely. Do not leave the handle inside the oven.

Removing and cleaning wire racks

- 1- Remove the knurled nuts by turning them counter clockwise.
- 2- Remove the wire racks by pulling them towards yourself.
- 3- To clean the wire racks either put them in the dishwasher or use a wet sponge, ensuring that they are dried afterwards.
- 4- After the cleaning process install the wire racks in reverse order.
- 5- Replace the knurled nuts.

2. USEFUL TIPS

2.1 SHELF SAFETY SYSTEM

The oven features a new shelf safety system.

This allows you to pull out the oven shelves when inspecting the food without danger of food spillages or shelves falling accidentally out of the oven.

To remove the shelves pull out and lift.

2.2 GRILLING

Grilling makes it possible to give food a rich brown colour quickly. For browning we recommend that you insert the grill onto the fourth level, depending on the proportions of the food (see fig. page 7).

Almost all food can be cooked under the grill except for very lean game and meat rolls.

Meat and fish that are going to be grilled should first be lightly doused with oil.

2.3 The U·COOK MODELS

U·COOK Ovens have an electronic control of the fan speed, called and patented VARIOFAN. During the cooking, this system changes automatically the speed of the fan (in multifunction mode) in order to optimize the air flow and the internal temperature in the cavity of the oven.

All U·COOK ovens feature the Soft Cook function.

This allows a management of the distribution of moisture and temperature. It reduces the loss of humidity of the 50 %, which guarantees the food remains tender and tastes better. This a delicate cooking is recommended for the baking of the bread and pastry.

It reduces the time of preheating of ovens: only 8 minutes to reach 200 degrees Celsius.

It gives the possibility of setting level and intensity of grilling, up to 50 % more power in comparison with a traditional multifunction oven.

Some ovens are equipped with the new doorj "WIDE DOOR" which has a bigger window area, this allows better maintenance and a improved thermal insulation.

2.4 According to the model U·SEE

Is an illumination system which replaces the traditional « light bulb ». 14 LED lights are integrated within the door. These produce white high quality illumination which enables to view the inside of the oven with clarity without any shadows on all the shelves.

U·SEE

Advantages :

System, besides providing excellent illumination inside the oven, lasts longer than the traditional light bulb its easier and to maintain and most of all saves energy.

- Optimum view
- Long life illumination
- Very low energy consumption, -95% in comparison with the traditional illumination High

"Appliance with white light LED of the 1M Class according to IEC 60825- 1:1993 + A1: 1997 + A2: 2001 (equivalent to EN 60825-1: 1994 + A1: 2002 + A2: 2001); the maximum light power emitted λ 459nm < 150uW.

Not observed directly with optical instruments. "

2.5 SELF-CLEANING OVEN WITH CATALYTIC

Special self-cleaning panels covered in a micro-porous coating are available as optional extras for all models. If they are fitted, the oven no longer needs to be cleaned by hand.

The fat that is splattered onto the sides of the oven during roasting is eliminated by the microporous coating which breaks the fat down by catalysis and transforms it into gas.

Excessive splattering may nevertheless block the pores and therefore hinder self-cleaning. The self-cleaning capacity may be restored by switching on the empty oven to maximum for about 10-20 minutes.

Do not use abrasive products, metal cleaning wads, sharp objects, rough cloths, or chemical products and detergents that may permanently damage the catalytic lining.

It is a good idea to use deep roasting trays to roast fatty foods such as joints of meat etc. and to put a tray underneath the grill to catch surplus fat. If the walls of the oven are so thickly coated in grease that the catalytic lining is no longer effective remove surplus grease with a soft cloth or sponge soaked in hot water.

The lining must be porous for self-cleaning to be effective.

N.B.: All catalytic linings currently on the market have a working life of about 300 hours. They should therefore be replaced after about 300 hours.

2.6 AQUACTIVA FUNCTION

The Aquactiva procedure uses steam to help remove remaining fat and food particles from the oven.

1. Pour 300 ml of water into the Aquactiva container at the bottom of the oven.

2. Set the oven function to Static () or Bottom () heater

3. Set the temperature to the Aquactiva icon 

4. Allow the program to operate for 30 minutes.

5. After 30 minutes switch off the program and allow the oven to cool down.

6. When the appliance is cool, clean the inner surfaces of the oven with a cloth.

Warning:

Make sure that the appliance is cool before you touch it.

Care must be taken with all hot surfaces as there is a risk of burns.

Use distilled or drinkable water.

2.7 CLEANING AND MAINTENANCE

Never use abrasive cleaners, wire wool or sharp objects to clean the glass oven door.

Clean the stainless steel and enamelled surfaces with warm, soapy water or with suitable brand products. On no account use abrasive powders that may damage surfaces and ruin the oven's appearance. It is very important to clean the oven each time that it is used. Melted fat is deposited on the sides of the oven during cooking. The next time the oven is used this fat could cause unpleasant odours and might even jeopardise the success of the cooking. Use hot water and detergent to clean; rinse out thoroughly.

To make this chore unnecessary all models can be lined with catalytic self-cleaning panels: these are supplied as an optional extra (see the section SELF-CLEANING OVEN WITH CATALYTIC LINING).

Use detergents and abrasive metal pads like «brillo pads» for the stainless steel grills.

The glass surfaces as the top, oven door and warming compartment door must be cleaned when they are cold. Damage that occurs to them because this rule was not adhered to are not covered by the guarantee.

To replace the interior light:

- switch off the mains power supply and unscrew bulb. Replace with an identical bulb that can withstand very high temperatures

2.8 SERVICE CENTRE

Before calling the Service Centre

If the oven is not working, we recommend that:

you check that the oven is properly plugged into the power supply.

If the cause of the fault cannot be detected:

disconnect the oven from the mains, do not touch the oven and call the after sales service.

Before calling the Service Centre remember to make a note of the serial number on the specifications plate (see fig. On last page).

The oven is supplied with a guarantee certificate that ensures that it will be repaired free of charge by the Service Centre

3. TIMER

3.1 USING THE MINUTE TIMER

To set the cooking time, turn dial one complete revolution and then position the index to the required time. When the time has lapsed, the signal will ring for a few seconds.

3.2 USING THE END OF COOKING TIMER

This control enables to set the desired cooking time (max. 120 min.) the oven will automatically switch off at the end of the set time.

The timer will count down from the set time return to the 0 position and switch off automatically.

For normal use of oven set the timer to the position.

To set the oven ensure the timer is not on the 0 position.

3.3 SETTING THE CORRECT TIME

WARNING : the first operation to carry out after the oven has been installed or following the interruption of power supply (this is recognizable the display pulsating and showing 12:00) is setting the correct time. This is achieved as follows.

- Push the central button.
- Set time with "-" "+" buttons.
- Release all buttons.

ATTENTION: The oven will only operate providing the clock is set.

3.4 USE OF TOUCH CONTROL CLOCK PROGRAMMER

FUNCTION	HOW TO ACTIVATE IT	HOW TO SWITCH IT OFF	WHAT IT DOES	WHAT IT IS FOR
KEY LOCK	<ul style="list-style-type: none"> •Child Lock function is activated by touching Set (+) for a minimum of 5 seconds. From this moment on all other function are locked and the display will flash STOP and preset time intermittently. 	<ul style="list-style-type: none"> •Child Lock function is deactivated by touching touchpad Set (+) again for a minimum of 5 seconds. From this moment on all functions are selectable again. 		
MINUTE MINDER 	<ul style="list-style-type: none"> •Push the central button 1 times •Press the buttons "-" "+" to set the required time •Release all the buttons 	<ul style="list-style-type: none"> •When the set time as elapsed an audible alarm is activated (this alarm will stop on its own, however it can be stopped immediately by pressing the button) SELECT. 	<ul style="list-style-type: none"> •Sounds an alarm at the end of the set time. •During the process, the display shows the remaining time. 	<ul style="list-style-type: none"> •Allows to use the oven as alarm clock (could be activated either with operating the oven or with out operating the oven)
COOKING TIME 	<ul style="list-style-type: none"> •Push the central button 2 times • Press the buttons "-" or "+" to set the length of cooking required •Release all buttons • Set the cooking function with the oven function selector 	<ul style="list-style-type: none"> •Push any button to stop the signal. Push the central button to return to the clock function 	<ul style="list-style-type: none"> • It allows to preset the cooking time required for the recipe chosen. • To check how long is left to run press the SELECT button 2 Times. • To alter/change the preset time press SELECT and "-" "+" buttons. 	<ul style="list-style-type: none"> •When the time is elapsed the oven will switch off automatically. Should you wish to stop cooking earlier either turn the function selector to 0, or set time to 0:00 (SELECT and "-" "+" buttons)
END OF COOKING 	<ul style="list-style-type: none"> •Push the central button 3 times •Press the buttons "-" "+" to set the time at which you wish the oven to switch off •Release the buttons •Set the cooking function with the oven function selector 	<ul style="list-style-type: none"> •At the time set, the oven will switch off. To switch off manually, turn the oven function selector to position 0. 	<ul style="list-style-type: none"> •Enables you to set the end of cooking time •To check the preset time push the central button 3 times •To modify the preset time press buttons SELECT + "-" "+" 	<ul style="list-style-type: none"> •This function is typically used with "cooking time" function. For example if the dish has to be cooked for 45 minutes and needs to be ready by 12:30, simply select the required function, set the cooking time to 45 minutes and the end of cooking time to 12:30. •At the end of the cooking set time, the oven will switch off automatically and an audible alarm will ring. •Cooking will start automatically at 11:45 (12:30 minus 45 mins) and will continue until the pre-set end-of-cooking-time, when the oven will switch itself off automatically. WARNING. If the END of cooking is selected without setting the length of cooking time, the oven will start cooking immediately and it will stop at the END of cooking time set.

4. OPERATING INSTRUCTIONS

Function dial	Temperature pre-set and setting. (Model with electronic programmer) (Type A)	Thermostat dial	Function
			Turns on the oven light This will automatically activate the cooling fan (on fan cooled models only)
			Defrosting When the dial is set to this position. The fan circulates air at room temperature around the, frozen food so that it defrosts in a few minutes without the protein content of the food being changed or altered.
Sprinter 	MAX	MAX	Super Grill This function allows to set food crunchiness. The Super Grill function is characterized by a 50% power increase in comparison to the standard grill.
 *	220 50 ÷ 240	50 ÷ MAX	Natural convection Bottom and top oven elements are used. This is the traditional form of baking and roasting. It is ideal for roasting joints of meat and game, baking biscuits and apples and making the food nice and crunchy.
 <hr/> 	200 50 ÷ 230	50 ÷ MAX	Fan cooking Both top and bottom heating elements are used with the fan circulating the air inside the oven. We recommend you use this method for poultry, pastries, fish and vegetables. Heat penetrates into the food better and both the cooking and preheating times are reduced. You can cook different foods at the same time with or without the same preparation in one or more positions. This cooking method gives even heat distribution and the smells are not mixed. Allow about ten minutes extra when cooking foods at the same time.
Soft cook 	200 50 ÷ 230	-	Soft Cook (a) Soft Cook is the function for the confectionery and the bread. Thanks to its reduced fan speed, this function increases oven internal damp. The increased damp creates the ideal conditions of cooking for those foods that need to maintain an elastic consistence while they are cooking (ex. cakes, bread, biscuits) avoiding surface breakages.
	160 50 ÷ 220	50 ÷ MAX	Fan plus lower element This function is ideal for delicate dishes (pies-souffle).
	Level 4 1 ÷ 4	50 ÷ MAX	GRILL: use the grill with the door closed. The top heating element is used alone and you can adjust the temperature. Five minutes preheating is required to get the elements red-hot. Success is guaranteed for grills, kebabs and gratin dishes. White meats should be put at a distance from the grill; the cooking time is longer, but the meat will be tastier. You can put red meats and fish fillets on the shelf with the drip tray underneath.
Super grill 	Level 4 1 ÷ 4	50 ÷ MAX	SUPER GRILL: the oven has two grill positions Grill : 2200 W Grill SUPER : 3000 W
	190 180 ÷ 200	50 ÷ 200	FAN ASSISTED GRILL (a): use the turbo-grill with the door closed. The top heating element is used with the fan circulating the air inside the oven. Preheating is necessary for red meats but not for white meats. Ideal for cooking thick food items, whole pieces such as roast pork, poultry, etc. Place the food to be grilled directly on the shelf centrally, at the middle level. Slide the drip tray under the shelf to collect the juices. Make sure that the food is not too close to the grill. Turn the food over halfway through cooking.
	Level 4 1 ÷ 4	50 ÷ 200	Grill/spit element. This is used for roasting on the spit.
	220	50 ÷ MAX	Function Pizza This function with hot air circulated in the oven ensure perfect result for dishes such as pizza or focaccia.
COOK light  *	190 180 ÷ 200	50 ÷ 200	The " COOK LIGHT " function allows you to cook in a healthier way, by reducing the amount of fat or oil required. Thanks to the use of the grill and fan combined with a pulsating cycle of air, it will retain the moisture content of the food, grilling the surface and using a shorter cooking time, without compromising on taste. It is particularly suitable for cooking meat, roasted vegetables and omelettes. The cycle of pulsed air keeps the humidity inside the oven and the moisture content of the food, preserving the nutritional values and ensuring a rapid uniform cooking process. Try all your recipes and reduce the amount of dressing you usually use and experience the lightness of this new function!

(a) on some models : function with "Vario Fan" is the exclusive system developed by Candy to optimize the cooking results, temperature management and damp management. The Vario Fan system is a self-activating system that changes automatically fan speed when a fan function is chosen: the fan functions are the one inside the outlined area on control panel.

* Tested in accordance with the CENELEC EN 60350-1 used for definition of energy class.

SUGGESTED RECIPES

Vegetable Muffins

Ingredients :

- 200 g of courgettes
- 200 g of potatoes
- 200 g of sweet potatoes
- 1 red pepper
- 1 yellow pepper
- 100 g of provolone cheese
- 1 teaspoon paprika
- 50 g of parmesan cheese
- 20 g of breadcrumbs

• Cut the courgettes and peppers and dice the potatoes, boil for a few minutes on hob top. Cut and stir fry the other vegetables for 5 minutes in a pan with olive oil and paprika, salt and pepper.

Once the potatoes are boiled mash and add to the other vegetables and chopped provolone.

In the meantime, prepare a mixture of breadcrumbs and parmesan cheese, mix half of it into the vegetables.

Flour the muffin molds and fill to the brim, put the remaining of bread and cheese mixture on the top and add a little olive oil. Bake in the oven with the COOK LIGHT function at 180 degrees for 15-20 minutes, until they are beautifully golden in colour.

Autumn Baked Frittata

Ingredients:

- 6 eggs
- 10 courgette flowers
- 1 boiled potato
- 1 slice of boiled pumpkin
- 200 g of parmesan cheese
- turmeric
- 6 tablespoons of milk

• Cut and boil 1 potato. Cut the pumpkin into slices and place on a baking sheet, put into the oven at 160 degrees for approximately 20 minutes.

Once cooked, mash with a fork.

Beat the eggs and add the boiled potato and the crushed pumpkin, milk, parmesan cheese, turmeric, salt and pepper.

Mix all the ingredients together and add the courgette flowers, ensure that they are cleaned and cut into small pieces.

Pour the mixture into the tin and bake with the COOK LIGHT function in the oven preheated at 180 for 20 minutes.

5. TABLES OF COOKING TIMES

The overall suggested cooking times set out below are intended as a rough guide only. They may in fact vary according to the quality, the freshness, the size and the thickness of the food cooked and of course cooking time is also partly a matter of taste. Let the food stand for a few minutes before serving because the ingredients continue cooking after they have been removed from the oven.

HANDY TIP: Lower the temperature so as to avoid the surface of the food becoming hard and dry.

Shelf position

Food	Quantity	Static electric oven			Electric fan oven			Remarks
		Shelf	Time of cooking in minutes	Oven temperature	Shelf	Time of cooking in minutes	Oven temperature	
• Pasta								
Lasagne	Kg 3,5	2	70 ÷ 75	220	2	60 ÷ 65	200	Put the lasagne into an unheated oven
Cannelloni	Kg 1,8	2	50 ÷ 60	220	2	40 ÷ 50	200	Put the cannelloni into an unheated oven
Oven baked pasta	Kg 2,5	2	55 ÷ 60	220	2	45 ÷ 50	200	Put the oven baked pasta into an unheated oven
• Baking (not cakes)								
Bread	Kg 1 di pasta	2	35 10 (pre-heating)	200	2	30 ÷ 35 10 (pre-heating)	180	Form the dough into a loaf and make a cross with a knife on top of the dough leave the dough to rise for at least 2 hours. Grease the baking tin and put the dough in the middle of it.
Pizza	Kg 1	1	25 ÷ 35	190	1	20 ÷ 25	190	Warm the oven for 15 minutes and place the pizzas on the greased baking tray. Garnish them with tomatoes, mozzarella, ham, oil, salt and origano.
Pastry (frozen) vol au vents	n° 24	1	30 ÷ 35	220	2	25 ÷ 30	200	Place 24 vol au vents in the oven and bake.
Focaccia (n° 4)	gr. 200 of dough each	2	25 ÷ 30	200	2	20 ÷ 25	180	Warm the oven for 15 minutes, grease the baking tray, season the 4 focaccia with oil and salt and leave them to rise at room temperature for at least 2 hours before putting them in the oven.
• Meat								
All meats can be roasted in shallow or deep roasting trays. It is advisable to cover the shallow trays to avoid splattering the sides of the oven with grease. The roasting times are the same whether the meat has been covered up or not.								
Whole joint of beef	Kg 1	3	70 ÷ 80	220	3	50 ÷ 60	200	Put the meat into a deep Pyrex dish and season with salt and pepper; turn the meat half way through cooking.
Joint of deboned	Kg 1	2	100 ÷ 110	220	2	80 ÷ 90	200	Cook the meat in a covered Pyrex dish with herbs, spice, oil and butter.
Joint of deboned veal	Kg 1,3	1	90 ÷ 110	220	2	90 ÷ 100	200	Cook as indicated above
Joint of fillet of beef	Kg 1	2	80 ÷ 90	220	2	80 ÷ 90	200	Cook as indicated above.

5. TABLES OF COOKING TIMES

Food	Quantity	Static electric oven			Electric fan oven			Remarks
		Shelf	Time of cooking in minutes	Oven temperature	Shelf	Time of cooking in minutes	Oven temperature	
• Rabbits and Poultry								
Guinea fowl	Kg 1-1,3	2	60 ÷ 80	220	2	60 ÷ 70	200	Place the guinea fowl in a deep Pyrex or pottery dish with very little oil and season with herbs and spices.
Chicken	Kg 1,5-1,7	2	110 ÷ 120	220	2	100 ÷ 110	200	Follow the procedure for cooking the guinea fowl.
Rabbit pieces	Kg 1-1,2	2	55 ÷ 65	220	2	50 ÷ 60	200	Put all the pieces of the same size in the glazed tray. Season with herbs and spices. Turn the pieces as and when required.
• Cakes								
Coconut cake baked in a tin		1	55	180	1	50	160	Use a tin that is 22 cm deep. Pre-heat for 10 mins.
Sponge cake		1	55	175	1	40 ÷ 45	160	Use a tin that is 22 cm deep. Pre-heat for 10 mins.
Carrot cake baked in a tin		1	65	180	1	50 ÷ 60	160	Use a tin that is 22 cm deep. Pre-heat for 10 mins.
Apricot pie	700 gr	1	40	200	2	30 ÷ 35	180	Use a tin that is 22 cm deep. Pre-heat for 10 mins.
• Vegetable								
Fennel	800 gr	1	70 ÷ 80	220	1	60 ÷ 70	200	Cut the fennel into four pieces, add butter, salt and potatoes if required and place in a Pyrex face up. Cover the dish.
Courgettes	800 gr	1	70	220	1	60 ÷ 70	200	Slice the courgettes, place in a Pyrex dish and add butter and salt.
Potatoes	800 gr	2	60 ÷ 65	220	2	60 ÷ 65	200	Cut the potatoes into equal parts and place in a Pyrex dish. Season with salt, origano and rosemary. Cook in oil.
Carrots	800 gr	1	80 ÷ 85	220	1	70 ÷ 80	200	Slice the carrots, place in a Pyrex dish and cook.
• Grilling								
Place the food to be grilled underneath the infra-red grill. Warning: When the grill is on it takes on a bright red colour. Place the tray underneath the grill to collect juices and fat from the food being grilled.								
Squares of bread for toasting	4 pieces	4	5 (5 to heat up grill)	Grill	4	5 (10 to heat up grill)	Grill	Lay the bread on the grill tray. When one side of the bread has been toasted, turn over and toast the other side. Remember: keep the toast warm at the bottom of the oven until you are ready to serve it.
Toasted sandwiches	4	3	10 (10 to heat up grill)	Grill	3	5/8 (10 to heat up grill)	Grill	Lay the bread on the grill tray. When one side of the sandwich has been toasted, turn over and toast the other side.
Sausages	n°6 / Kg 0,9	4	25/30 (5 to heat up grill)	Grill	4	15/20 (10 to heat up grill)	Grill	Cut the sausages in half and lay them face down on the grill. Half way through grilling turn them over. Every so often, check that they are being cooked equally all over. (If this is not happening, turn and reposition the ones being cooked either less or more than the others.
Ribs of beef	n°4 / Kg 1,5	4	25 (5 to heat up grill)	Grill	4	15/20 (10 to heat up grill)	Grill	Make sure that the ribs of beef are exposed to the full effect on the main grill.
Chicken legs	n°4 / Kg 1,5	3	50/60 (5 to heat up grill)	Grill	3	50/60 (10 to heat up grill)	Grill	Turn them over twice during grilling
• Fish								
Trout	3 whole trout or / Kg 1	2	40 ÷ 45	220	2	35 ÷ 40	200	Cover the trout with salt, oil and onions and cook in a Pyrex dish.
Salmon	700 g 2,5 cm slice	2	30 ÷ 35	220	2	30 ÷ 25	200	Cook the salmon in an open Pyrex dish with salt, pepper and oil.
Sole	Kg 1	2	40 ÷ 45	220	2	35 ÷ 40	200	Cook the sole with salt and a spoonful of oil.
Bream	2 whole ones	2	40 ÷ 45	220	2	35 ÷ 40	200	Cook the bream in oil and salt in a covered dish.
• Fruit								
Whole apples	Kg 1	1	45 ÷ 55	220	2	45 ÷ 55	200	Bake the fruit in an open Pyrex or earthenware dish. Leave it to cool inside the oven.
Pears	Kg 1	1	45 ÷ 55	220	2	45 ÷ 55	200	Follow procedure above.
Peaches	Kg 1	1	45 ÷ 55	220	2	45 ÷ 55	200	Follow procedure above.

SAFETY INSTRUCTIONS

We recommend you keep the instructions for installation and use for later reference, and before installing the hob, note its serial number in case you need to get help from the after sales service.

WARNING: the appliance and its accessible parts become hot during use. Care should be taken to avoid touching heating elements. Children under 8 years of age must be kept away from the appliance unless they are continuously supervised.

WARNING: use only hob guards designed by the Manufacturer of the cooking appliance or indicated by the Manufacturer of the appliance in the instructions for use as suitable or hob guards incorporated in the appliance. The use of inappropriate guards can cause accidents.

WARNING: unattended cooking on a hob with fat or oil can be dangerous and may result in fire. NEVER try to extinguish a fire with water, but switch off the appliance and then cover flame e.g. with a lid or a fire blanket.

WARNING: danger of fire: do not store items on the cooking surfaces.

WARNING: if the surface is cracked, do not touch the glass and switch off the appliance to avoid the possibility of electric shock.

This appliance can be used by children aged from 8 years and above and people with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children should be supervised to ensure that they do not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.

CAUTION: the cooking process must be supervised. A short term cooking process has to be supervised continuously.

It is strongly recommended to keep children away from the cooking zones while they are in operation or when they are switched off, so long as the residual heat indicator is on, in order to prevent the risks of serious burns.

This appliance is not intended to be operated by means of an external timer or separate remote control system.

If present do not to stare into halogen lamp hob elements.

Connect a plug to the supply cable that is able to bear the voltage, current and load indicated on the tag and having the earth contact. The socket must be suitable for the load indicated on the tag and must be having the earth contact connected and in operation. The earth conductor is yellow-green in color. This operation should be carried out by a

suitably qualified professional. In case of incompatibility between the socket and the appliance plug, ask a qualified electrician to substitute the socket with another suitable type. The plug and the socket must be conformed to the current norms of the installation country. Connection to the power source can also be made by placing an omnipolar breaker between the appliance and the power source that can bear the maximum connected load and that is in line with current legislation.

The yellow-green earth cable should not be interrupted by the breaker. The socket or omnipolar breaker used for the connection should be easily accessible when the appliance is installed.

The disconnection may be achieved by having the plug accessible or by incorporating a switch in the fixed wiring in accordance with the wiring rules.

If the supply cord is damaged, it must be replaced by Manufacturer, its service agent or similarly qualified people in order to avoid a hazard. The earth conductor (yellow-green) must be longer than 10 mm on the terminal block side. The internal conductors section should be appropriate to the power absorbed by the hob (indicated on the tag). The type of power cable must be HO5V2V2-F.

Do not put metallic objects such as knives, forks, spoons or lids on the hob. They could heat up.

Aluminum foil and plastic pans must not be placed on heating zones.

After every use, some cleaning of the hob is necessary to prevent the build-up of dirt and grease. If left, this is recooked when the hob is used and burns giving off smoke and unpleasant smells, not to mention the risks of fire propagation.

Never use a steam or high pressure spray to clean the appliance.

Do not touch the heat zones during operation or for a while after use.

Never cook food directly on the glass ceramic hob.

Always use the appropriate cookware. Always place the pan in the center of the unit that you are cooking on.

Do not place anything on control panel.

Do not use the hob as a working surface.

Do not use the surface as a cutting board.

Do not store heavy items above the hob. If they drop onto the hob, they may cause damage.

Do not use the hob for storage of any items.

Do not slide cookware across the hob.

Identification Plate (located under the hob's bottom casing)

1. GENERAL WARNINGS

By placing the **CE** mark on this appliance we are assuring compliance to all European Safety, Health and Environment requirements which are applicable for this product category.

2. PROTECTION OF THE ENVIRONMENT

This appliance is marked according to European Directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE). WEEE contains both polluting substances (which can cause negative consequences for the environment) and basic components which can be reused. It is important to have WEEE subjected to specific treatments, in order to remove and dispose properly all pollutants and recover and recycle all materials.

Individuals can play an important role in ensuring that the WEEE does not become an environmental issue; it is essential to follow some basic rules:

- WEEE shall not be threatened as household waste.
- WEEE shall be handled over to the relevant collection points managed by the municipality or by registered companies. In many Countries, for large WEEE, home collection could be present.
- In many Countries, when you buy a new appliance, the old one may be returned to the retailer who has to collect it free of charge on a one-to-one basis, as long as the appliance is of equivalent typology and has the same functions as the supplied one.

3. INSTALLATION

Installing a domestic appliance it is a complicated operation which, if not carried out correctly, can seriously have impact on safety of goods, properties or people. For this reason, it should be carried out by a professionally qualified person in accordance with technical regulations.

In the event that this advice is ignored and installation is carried out by an unqualified person, the Manufacturer declines all responsibility for any technical failure of the appliance whether or not it results in damage of goods or properties or in injury of people or animals.

After having removed the packaging please be sure that the appliance it is not damaged, otherwise contact the Retailer or Manufacturer After Sales Service.

Make sure that the furniture in which the appliance will be fitted and all other furniture in the nearby are made with materials which can withstand high temperatures (min 100 °C).

In addition, all decorative laminates should be fixed with high-resistance glue.

Appliance can be installed in a Built-in furniture in "Standard" or "Flush" mode.

Worktop thickness should be between 25 and 45 mm.

Standard installation perimeter

Flush installation perimeter

Note: Inner perimeter dimensions are same with standard installation

Leave a distance of at least 55 mm between the hob and the back wall and of at least 150 mm between the hob and the vertical furniture or walls in the lateral side. If a furniture is installed above the hob, the minimum distance required is 700 mm.

When installing a hood above the hob, please consult the installation requirements specified for the hood but, in any case, the distance between the hob and the hood must not be lower than 700 mm.

If the bottom part of the hob is adjacent to an area normally accessible for handling or cleaning operations, a separator it must be put 20 mm below the bottom part of the hob.

When installing an oven under the hob, separator must not be put and the minimum distance between the bottom part of the hob and the oven must not be lower than 10 mm. Do not install not cooled oven under this hob and install the oven following its own installation requirements.

A watertight seal gasket is supplied with the hob. Fit the seal gasket around the bottom hob as described and make sure that it is properly fitted to avoid any leakage into the supporting furniture.

Normal Fixing:

- Get the fixing clips from accessory bag and screw them into the position shown on bottom box. (Do not tighten the screws to block clips, they should move freely)

- Insert the hob in center position of cut out.
- Turn the clips and tighten them fully.

Quick Fixing: (Depending on model)

Get four springs from accessory bag and screw them onto bottom box as shown in figure.

Center and insert the hob. Press the sides of hob until it is supported around its entire perimeter.

FLUSH INSTALLATION

After checking that the position of the hob is correct fill the gap between the worktop and the hob with silicone adhesive. Flatten the silicone layer with a scraper or with wet finger dampened with water and soap before it forms. Do not use the hob until the silicone layer it is completely dry.

**"Installation must conform to the standards & directives."
 Manufacturer declines all responsibility for any damage that
 might be caused by unsuitable or unreasonable use.**

WARNING: Manufacturer cannot be held responsible for any incident or its consequences that may arise during the use of an appliance not linked to the earth, or linked to an earth whose continuity is defective. Before any electrical operation, please check the supply tension shown on the electricity meter, the adjustment of the circuit-breaker, the continuity of the connection to earth to the installation and that the fuse is suitable.

The electrical connection to the installation should be made according to the rated power of the Appliance; this should be made via an Omni pole cut-out switch.

If the appliance has a socket outlet, it must be installed so that the socket outlet is accessible.

The yellow/green wire of the power supply cable must be connected to the earth of both power supply and appliance terminals. For any questions regarding power supply cord refer to After Sales Service or a qualified technician.

If the hob is fitted with power supply cord, this shall be connected only to a power supply of 220-240 V between phase and neutral.

It is however possible to connect the hob to:

- Three Phase 220-240 V3
- Three Phase 380-415 V2N

To proceed to the new connection, please follow below instructions: Before making the connection, make sure that the installation is protected by a suitable fuse, and that it is fitted with wires of a large enough section to supply the appliance normally. Turn over the hob, glass side against the working top, taking care to protect the glass.

Open the cover in the following sequence:

- unscrew the cable clamp "1";
- find the two tabs located on the sides;
- put the blade of a flat screw-driver in front of each tab "2" e "3", push in and press;
- remove the cover.

To release the power supply cord:

- Remove the screws retaining the terminal block which contains the shunt bars and the conductors of the supply cord;
- Pull out the supply cord.

Operations to be carried out to make a new connection:

- Choose the power supply cable in accordance with the recommendations in the table;
- Pass the power supply cable into the clamp;
- Strip the end of each conductor of the supply cord on a 10 mm length, by taking in account the requested length of the cord for the connection to the terminal block;
- According to the installation and with the help of shunt bars which you should have recovered in the first operation, fix the conductor as shown on the chart;
- Fix the cover;
- Screw the cable clamp.

Note: make sure the terminal board screws are tight.

Operations to be carried out to make a new connection:

- Choose the power supply cable in accordance with the recommendations in the table;
- Pass the power supply cable into the clamp;
- Strip the end of each conductor of the supply cord on a 10 mm length, by taking in account the requested length of the cord for the connection to the terminal block;
- According to the installation and with the help of shunt bars which you should have recovered in the first operation, fix the conductor as shown on the chart;
- Fix the cover;
- Screw the cable clamp.

ATTENTION:

If it should be necessary to replace the power supply cord, connect the wire in accordance with following colors/codes:

BLUE	Neutral	(N)
BROWN	Live	(L)
YELLOW-GREEN	Earth	(⊕)

Connection to the terminals on the terminal block

	LAY OUT "1-6"	LAY OUT "7"
MONOPHASE or TWO PHASES 220-240 V~

5. HOB COOKWARE ADVICE

Using good quality cookware is critical for setting the best performance from your hob.

- **Always use good quality cookware with perfectly flat and thick bases** : using this type of cookware will prevent hot spots that cause food to stick. Thick metal pots and pans will provide an even distribution of heat.
- **Ensure that the base of the pot or pan is dry** : when filling pans with liquid or using one that has been stored in the refrigerator, ensure that the base of the pan is completely dry before placing it on the hob. This will help to avoid staining the hob.
- **Use pans whose diameter is wide enough to completely cover the surface unit** : the size of the pan should be no smaller than the heating area. If it is slightly wider the energy will be used at its maximum efficiency.

THE CHOICE OF COOKWARE - The following information will help you to choose cookware which will give good performance.

Stainless Steel : *highly recommended*. Especially good with a sandwich clad base. The sandwich base combines the benefits of stainless steel (appearance, durability and stability) with the advantages of aluminium or copper (heat conduction, even heat distribution).

Aluminium : *heavy weight recommended*. Good conductivity. Aluminium residues sometimes appear as scratches on the hob, but can be removed if cleaned immediately. Because of its low melting point, thin aluminium should not be used.

Cast Iron : *usable, but not recommended*. Poor performance. May scratch the surface.

Copper Bottom / stoneware: *heavy weight recommended*. Good performance, but copper may leave residues which can appear as scratches. The residues can be removed, as long as the hob is cleaned immediately. However, do not let these pots boil dry. Overheated metal can bond to glass hobs. An overheated copper pot will leave a residue that will permanently stain the hob.

Porcelain/enamel : Good performance only with a thin smooth, flat base.

Glass-ceramic : *not recommended*. Poor performance. May scratch the surface.

6. USE

Switch ON/OFF a heater zone

To switch ON a heater Touch any heater's zone during 400 msec. Long beep will be heard and "0" value will appear in target zone digit, indicating power level.

- 1) If any cooking stage is in position 0, this display will switch OFF automatically after 10 seconds and the zone OFF sequence will sound.
- 2) If there is residual heat indication in the display which is ON but in 0 power, "0" will appear changing over.
- 3) If lock function is active you cannot switch ON a zone.

To switch OFF a heater Touch any heater's zone during 1,2 sec. 3 Short beeps will be heard and nothing or "H" value will appear in target zone digit if residual heat exists. Zone will be OFF.

1) If any cooking stage is in position 0, this display will switch OFF automatically after 10 seconds and the zone OFF sequence will sound.

2) If there is residual heat indication in the display which is OFF, "H" will be displayed.

3) Even lock function is active you can switch OFF a zone.

4) If only one heater is active and this one is switched off, 4 Short beep will be heard indicating all cook top is Off.

Selecting a zone

When zone is already ON a lower lighting intensity for the not selected zones that are ON is produced.

If only one zone is ON, this zone is already selected by default, without needing to short press (150 msec) over selection key.

Increase / Decrease power level

With a short press on '+' or '-' keys, Increase or decrease power in the selected zones digit: 0-1-2-3...9-P

1. For Long Presses in + or - keys, power level increases /decreases continuously. With a fast increase, power stops at level 9, and for a higher power another short press is needed on the + key. No beep sound is heard with fast increase / decrease.

2. Once arrived to P power level, pressing + key again does not change power level to 0. Once arrived to 0 power level, pressing - key again does not change power level to P.

3. With a zone ON at 0 power level, if the zone is hot, 0 will blink alternatively. After 10 seconds, 0 will disappear an 'H' letter will appear fixed on display.

4. When a heater is selected and '+' & '-' keys are touched at the same time, power level will go to '0' but heater will maintain selected during 10 seconds. If heater was temporized, timer will go to Off. This action can only be developed in several cases depending touch control configuration. The following examples are for information only. Personal experience should then let you adapt these settings to your taste and habits.

Child Lock option

This action will be done when '+' & '-' keys were touched at the same time.

Then, any time when a key will be touched, displays will show "L" during 2sec. heating remains at the same state.

To deactivate Child Lock, follow the same process explained before. Then Short beep will be heard and displays will show "n" letter. Hob will remain unlocked.

Note: An automatic child lock will produce in 15 minutes after total Switch OFF of the hob. This function will happens automatically but previously is necessary to program it. See User settings point.

Double / Triple zones

To switch ON double extension ring, associated main zone must be already ON and Indicating power level must be higher than 0.

8.1- Double zone ON

1st Short Press on extension key Switches ON extension ring. LED over extension key turns ON if Extension ring is ON.

2nd Short Press on extension key Switches OFF extension ring. 
Short beep each press on extension key.

8.2- Triple zone ON

1st Short Press on extension key Switches ON 1st extension ring. 1 LED over extension key turns ON if 1st extension ring is ON (left LED in case of triple zone, middle and only LED in case of double zone) 2nd Short Press on extension key Switches ON 2nd extension ring. 2 LEDs over extension key turn ON if 1st and 2nd extension rings are ON

3rd Short Press on extension key. Switches OFF 1st and 2nd extension rings. 

Short beep each press on extension key.

Bridge function

The bridge can be enabled only when both heaters are off. One heater of the bridge has been selected, to activate bridge function touch bridge key. 

A beep sounds and the zone LED is switched on if the zone is enabled.

Both bridge heaters will be selected at the same time.

Once the heaters selected, if the power level is not the desired power level, by the + - keys.

Both bridge heater displays will show same power level.

The function will finish:

- If the bridge key is touched in setting mode
- If user selects power level "0"

Overflow security

Something (an object or a liquid) is pressing any key during more than 5s. 2 Short Beep + 1 Long beep every 30s while the key is pressed. Cook-top will turn Off.  This symbol will maintain blinking while the matter persist.

Timer

Timer function can be activated with its own key.

Select the zone to be timed. Power level of the zone greater than 0. Static  is displayed in the zone being timed. "00" in the digits reserved for the timer.

- 1) With "+" or "-" keys, timer time can be chosen. No Beeps at time change.
- 2) Pressing simultaneously timer "+/-" keys the timer is cancelled (goes to 00).
- 3) If timer "+" or "-" keys is maintained pressed during TBD time, there is quick setting.
- 4) When setting timer time, it is possible to go from "00" to "99" with "-" key, and from "99" to "00" with "+" key.
- 5) Maximum time 99 minutes.
- 6) When the time is elapsed and the hob is beeping, press any key and the alarm and digit sequence will end.
- 7) It is possible to adjust the timer time while the timer is previously running.
- 8) Power of timed zone can be modified without consequences on the timer programming.
- 9) Last minute will be displayed by seconds (For Variants only visible if we enter the timer programming while the last minute of the countdown)
- 10) Pressing the Timer key without any selected zone and when no zone is being timed, does nothing.
- 11) Pressing the Timer key without any selected zone and when many zones are being timed, the time shown in time digits changes in a rotatory way, and shows the time whose power display has the decimal point ON.
- 12) Alternatively Power (5s) and (0,5s) is displayed in the zone being timed.

Remaining time is displayed in the digits reserved for the timer. If multiple zones are timed, the smallest remaining time is displayed, and the decimal point is displayed in the corresponding zone.

Residual Heat Indicator (In radiant heaters-> calculated)

The same indicators can be used for "residual heat" indication as well. A time table must be defined on this purpose: Rest Heat time=f (power level, working time).

While a temperature on the cook top glass surface is above 65°C(theory value), this condition will be shown in the associated display, by means of an "H".

To generate a temperature above 65°C a heating element has to be in operation for certain time, this time depends on the power level. Once this time has expired, the residual heat warning will be shown when the heating element is switched off.

Automatic Safety Off

If the power level is not changed during a preset time, the corresponding heater turns off automatically.

The maximum time a heater can stay on, depends on the selected cooking level.

Power level	Max. time on (hours)
1	10
2	5
3	5
4	4
5	3
6	2
7	2
8	2
9	2
P	2

NOTE: while an overheating situation should occur during the operation of the highest power levels, the Hob control will automatically adjust the power level in order to protect the hob from overheating.

7. CLEANING AND MAINTENANCE

. Before carrying out any maintenance work on the hob, allow it to cool down.

. Only products, (creams and scrapers) specifically designed for aglass ceramic surfaces should be used. They are obtainable from hardware stores.

. Avoid spillages, as anything which falls on to the hob surface will quickly burn and will make cleaning more difficult.

. It is advisable to keep away from the hob all substances which are liable to melt, such as plastic items, sugar, or sugar-based products.

MAINTENANCE:

- Place a few drops of the specialised cleaning product on the hob surface.
- Rub any stubborn stains with a soft cloth or with slightly damp kitchen paper.
- Wipe with a soft cloth or dry kitchen paper until the surface is clean.

If there are still some stubborn stains:

- Place a few more drops of specialised cleaning fluid on the surface.
- Scrape with a scraper, holding it at an angle of 30° to the hob, until the stains disappear.
- Wipe with a soft cloth or dry kitchen paper until the surface is clean.
- Repeat the operation if necessary.

A FEW HINTS:

Frequent cleaning leaves a protective layer which is essential to prevent scratches and wear. Make sure that the surface is clean before using the hob again. To remove marks left by water, use a few drops of white vinegar or lemon juice. Then wipe with absorbent paper and a few drops of specialised cleaning fluid.

The glass ceramic surface will withstand scraping from flat-bottomed cooking vessels, however, it is always better to lift them when moving them from one zone to another.

NB:

Do not use a sponge which is too wet.
Never use a knife or a screwdriver.
A scraper with a razor blade will not damage the surface, as long as it is kept at an angle of 30°.
Never leave a scraper with a razor blade within the reach of children.
Never use abrasive products or scouring powders.

. **The metal surround** : to safely clean the metal surround wash with soap and water, rinse, then dry with a soft cloth.

Any change in the colour of the glass-ceramic surface does not affect its operation or the stability of the surface. Such discolorations are mostly a result of burnt food residues or use of cookware made of materials such as aluminium or copper; these stains are difficult to remove.

8. PROBLEM SOLVING

The cooking zones do not simmer or only fry gently

Only use flat-bottomed pans. If light is visible between the pan and the hob, the zone is not transmitting heat correctly.
The pan bottom should fully cover the diameter of the selected zone.

The cooking is too slow

Unsuitable pans are being used. Only use flat-bottomed utensils, that are heavy and have a diameter at least the same as the cooking zone.

Small scratches or abrasions on the hob's glass surface

Incorrect cleaning or rough-bottomed pans are used; particles like grains of sand or salt get between the hob and the bottom of the pan. Refer to the "CLEANING" section; make sure that pan bottoms are clean before use and only use smooth-bottomed pans. Scratches can be lessened only if the cleaning is done correctly.

Metal marks

Do not slide aluminium pans on the hob. Refer to the cleaning recommendations.
You use the correct materials, but the stains persist.
Use a razor blade and follow the "CLEANING" section.

Dark stains

Use a razor blade and follow the "CLEANING" section.

Light surfaces on the hob

Marks from an aluminium or copper pan, but also mineral, water or food deposits; they can be removed using the cream cleaner.

Caramelisation or melted plastic on the hob.

Refer to the "CLEANING" section.

The hob does not operate or certain zones don't work

The shunts are not positioned correctly on the terminal board.
Have a check made that the connection is done the control panel is locked. Unlock the hob.

The hob does not cut off.

The control panel is locked. Unlock the hob.

Frequency of on/off operations for cooking zones

The on-off cycles vary according to the required heat level:

- low level: short operating time,
- high level: long operating time.

The cooktop is not working.

Check the condition of the fuses / circuit breakers at your location. Check to see if you are experiencing a power failure.

The cooktop has turned itself off.

The main switch (ON/OFF key) was accidentally touched or there is any object above any key. Turn the unit on again without any object about the keyboard. Enter your settings again.

Display F and numbers

If F and numbers appears in the display, your unit has detected a fault. The following table list actions you can take to correct the problem.

9. AFTERCARE

Before calling out a Service Engineer please check the following:

— that the plug is correctly inserted and fused;
If the fault cannot be identified switch off the appliance — do not tamper with it — call the Aftercare Service Centre. The appliance is supplied with a guarantee certificate that ensures that it will be repaired free of charge at the Service Centre.

Heater display	Fault	Action
F0	Touch control software error.	If error has occurred disconnected and connect again the cooktop to the power supply. If error persist, call after-sales service. If error appears suddenly in a normal operation, call after-sales service.
Fc	Touch control zone is too hot and has turned off all the heaters.	Wait until temperature goes down. Cook-top will automatically recovered when temperature reaches a normal value.
Ft	Touch control temperature sensor can be damaged.	Wait until temperature goes down. If message persist when temperature reaches an environment value, call after-sales service.
FE	Touch control temperature sensor can be damaged.	Wait until temperature goes down. If message persist when temperature reaches an environment value, call after-sales service.
Fb	Excessive sensitivity on any key.	See if cook-top is mounted correctly. Be sure that keys touch correctly the glass surface.
FU / FJ	Security keyboard error	This error is a keyboard auto-check. It disappears when autocheck return to secure value. If error persist, call after-sale service.
FA	Security software error	This error is a software auto-check. It disappears when auto-check return to secure value. If error persist, call after-sale service.
FC / Fd	Security software error	This error is a software auto-check. It disappears when auto-check return to secure value. If error persist, call after-sale service.
Fr	Relays security error	Any relay driver can have any problemn. Remove cook-top from the power supply, wait a minute and switch on again. If error persist, call after-sale service.
