

WALL FIXING INSTRUCTIONS

1. When you have decided on the best position for each item, place the relevant template against the wall. (It may be easier if you cut them out). Having made sure that the template is horizontal, carefully mark the wall through the centre of the crosses using a sharp pencil or nail.

2. Drill the holes which you have marked using a 6mm bit.

   IMPORTANT: When drilling into walls be certain that there are no hidden wires, pipes etc. If in doubt consult a qualified tradesman.

3. Insert the wall plugs and screws. The screw head should finish 5mm from the wall.

   IMPORTANT: Due to different wall types and fixing positions, it is important to check that the screw and plugs supplied are suitable.

4. Carefully hook the backplates onto the two screw heads. **Make sure the item is secure.**
