

Google Home Mini

Features:

Small and mighty.

Get hands-free help in any room. Google Home Mini is powered by the Google Assistant, so that you can ask it questions and tell it to do things. Just start by saying, "Ok Google".

Get answers from Google.

Just by using your voice, get the latest weather, traffic, finance, news, sports and more. Ask for things like translations, calculations, nutrition information and unit conversions. Or find other information that you're curious about with the power of Google Search built right in.

Manage your day from breakfast to bed.

Get help around the house with things like your schedule, commute, travel information and more. Google Home Mini can even help you find a lost iPhone or Android phone and make phone calls to personal contacts or UK businesses.¹

"Hey Google, wake me up at 6:30 AM tomorrow."

Play, pause and rewind. Hands-free.

Pair with a Chromecast to control movies and shows from compatible content providers, using only your voice. You can also ask Google Home to play audiobooks from Google Play.²

"Hey Google, play Stranger Things from Netflix on my TV."²

Control your smart home with just a few words.

Use your voice to control compatible lights, thermostats, switches and more from your favourite home automation systems, like Philips Hue, Nest and Samsung SmartThings.

Your voice. Your info.

The Google Assistant provides information that's personalised just for you since it can distinguish your voice from others.³

Choose between different colours.

Google Home Mini comes in three unique colours, Chalk, Charcoal and Coral. Select the right colour that matches your room and personal style.

1. The calling feature allows outgoing calls to most phone numbers in the United Kingdom, but does not support calls to emergency numbers (including 999 and 112) or premium rate numbers.

2. Google Home is optimised for selected compatible music and video services only. Subscriptions/payments or may be required. Controlling your TV or speakers requires a Chromecast. Auto-switch to HDMI input may need to be set up on TV.
